

Rathbone Strategic Bond Fund

Investment objective

The objective of the fund is to focus on achieving a total return comprised of a regular above average income, coupled with medium to longer term capital growth from a diversified portfolio of predominantly Sterling denominated (or hedged back to Sterling) fixed interest and other bond instruments, including gilt edged and other sovereign stocks, corporate bonds, convertibles, preference shares, permanent interest bearing shares. Typically, approximately 50% of the value of the fund will be exposed to such securities through investment in other collective investment schemes (funds). During extreme market conditions the Manager may decide to safeguard the interests of investors by moving the entire portfolio into gilt edged stocks.

Fund snapshot

Managed with volatility (performance ups and downs) in mind, this fund targets lower levels than the sector to offer steady fixed income returns. Generating returns that are less correlated (moving together) with risk markets acts as a good diversifier for portfolios that have higher beta risk assets in them. With no income target, distributions are a function of the fund's asset allocation. The fund achieves its lower volatility by investing in multi-asset fixed income assets that can invest across most fixed income markets. Typically, half the base portfolio is invested in direct bonds (predominantly gilts and sterling-denominated investment grade corporate debt) and the remainder invested in funds. We use funds to access expertise in specialist areas such as high-yield, emerging market, and distressed debt, as well as credit alternatives. That ensures a greater spread of risk than a directly invested fund could otherwise achieve.

Fund facts

You should know

Important information

Copies of the Prospectus, the Key Investor Information Document (KIID), the Supplementary Information Document (SID), and application forms may be obtained, free of charge, from Rathbone Unit Trust Management Limited.

Changes in rates of exchange between currencies may cause the value of investments to decrease or increase. Details of tax levels and reliefs may change in the future. The value of any tax relief depends on individual circumstances. If you have any doubts about your tax position, or the suitability of this investment, you should seek professional advice.

Interest rate fluctuations are likely to affect the capital value of investments within bond funds. When long term interest rates rise the capital value of units is likely to fall and vice versa. The effect will be more apparent on funds that invest significantly in long-dated securities. The value of capital and income will fluctuate as interest rates and credit ratings of the issuing companies change.

Derivatives and forward transactions may be used by the fund for investment purposes as well as for the purposes of efficient portfolio management (including hedging). The use of derivatives for investment purposes may increase the volatility of the fund's Net Asset Value and may increase its risk profile.

To meet the investment objective, the fund may also invest, at the Manager's discretion, in other transferable securities, money market instruments, warrants, cash and near cash and deposits. Use may be made of stocklending, borrowing, hedging and other investment techniques permitted by the FCA rules and by the investment limits set out in the Prospectus.

As the Manager's annual fee is taken out from capital, distributable income will be increased at the expense of capital which will either be eroded or future growth constrained. All charges are deducted from the fund's capital.

Information notes

*The historic distribution yield reflects the annualised income net of the expenses in the fund (calculated in accordance with the relevant accounting standards) as a percentage of the mid-market unit price of the fund as at the date shown. It is based on a snapshot of the portfolio on that day. It does not include any initial charge and investors may be subject to tax on their distributions.

†The OCF includes the charges for the underlying funds held in the product. From April 2018, the Ongoing Charges Figure has been calculated according to PRIIPs regulations, which came into effect on 1 January 2018. Holdings are based on six monthly audited accounts. Changes to fund holdings within this period may result in higher or lower ongoing charges.

Source performance data Financial Express, mid to mid, net income re-invested. This is net of expenses and tax. Data using prices as at 31.03.2019. **Volatility and Maximum drawdown given on a 5 year rolling basis. ***Turnover is calculated on a 1 year rolling basis.
