

Rathbone SICAV Multi-Asset Strategic Growth Portfolio

Investment objective

The sub-fund's objective is to deliver a greater total return than the Consumer Price Index (CPI) measure of inflation +3%, after fees, over any rolling five-year period by investing with the Liquidity, Equity-type risk and Diversifiers assets (LED) framework developed by the investment manager.

The sub-fund aims to deliver this return with no more than two-thirds of the volatility of the FTSE Developed Market Index. There is no guarantee that the sub-fund will achieve a positive return over this, or any other, period and you may not get back the original amount you invested.

Information notes

CET - Central European Time

[†]Mid market value

[^]The OCF includes the charges for the underlying funds held in the product. From April 2018, the ongoing charges figure has been calculated according to PRIIPs regulations, which came into effect on 1 January 2018. Holdings are based on six monthly audited accounts. Changes to fund holdings within this period may result in higher or lower ongoing charges.

Source performance data FE fundinfo, mid to mid, net income re-invested. This is net of expenses and tax. Data using prices as at 28.02.2023. UK Consumer Price Inflation figures quoted with a one month lag. SICAV L-class shares were launched in May 2016. *Performance is shown for SICAV L-class accumulation shares, which were launched on 15 July 2016, total return net income reinvested. The volatility as a percentage of the FTSE Developed Index figures are calculated using monthly data.

** (Targeting $\leq 66.67\%$).

***Volatility, Sharpe Ratio and Maximum Drawdown given on a 5 year rolling basis. Sharpe Ratio calculated using a Risk Free Rate based on SONIA.

Rathbone Multi-Asset Strategic Growth Portfolio Benchmark

Our benchmarks are calculated on the rate of change of the CPI index, over different time periods (e.g. if we were calculating year to date figures in January 2013, we would look at the percentage change from December 2012 to the end of January 2013). So we take CPI to the current value, and add on the 3% prorated over a year (roughly 0.25% per month). If the CPI Index benchmark were to fall, more than the amount pro-rata, the benchmark year-to-date will be negative, even though inflation as reported by the media (calculated specifically as a 12M rate of change), remains positive.

Source and Copyright Citywire: David Coombs is A rated by Citywire for his three year risk adjusted performance for the period 31.01.2020-31.01.2023.

Please refer to the Prospectus of the UCITS and the KID and/or KIID before making any final investment decisions.
